

Experiment –01

Aim: To design an Entity-Relationship (E-R) diagram for an Indian e-commerce platform with entities such as Customer, Product, Order, Order Item, Seller, Category, Payment, Delivery, and Address, including primary keys, composite and multi-valued attributes, weak entities, specialization of Product, and participation constraints.

Output:

1. Identification of entities: Customer, Product, Order, Order Item, Seller, Category, Payment, Delivery, and Address.
2. Identification of relationships between the entities.
3. E-R diagram showing primary keys, composite attributes, multi-valued attributes, weak entity, and Product specialization.
4. E-R diagram showing appropriate cardinalities and participation constraints.

E-R Diagram:
